

AU200 Trade Cartel — Full System Requirements

Everything discussed across the entire session

1. INSTRUMENT

- **Market:** AU200 (ASX 200 Index CFD)
- **Timeframe:** 5-minute chart
- **Broker/Data:** Capital.com on TradingView
- **Contract value:** \$100 AUD per point
- **Commission:** 1 point per contract (included in all backtest results)
- **Currency:** AUD
- **Initial capital:** \$50,000 AUD
- **Quantity:** 1 contract fixed

2. THE INDICATOR — DIALECTIC ENGINE v4 (DE v4)

The actual indicator is **Dialectic Engine v4** — a custom proprietary indicator already built and stored in `DE_v4_V2.pine`. It is NOT UT Bot.

DE v4 generates four signal types:

- **TREND BUY** → go LONG
- **TREND SELL** → go SHORT
- **REV BUY** → SKIP (do not trade)
- **REV SELL** → SKIP (do not trade)

Only TREND signals are used. REV signals are ignored entirely.

DE v4 Internal Components & Exact Parameters

Component	Parameter	Value
SuperTrend	ATR Period	97
SuperTrend	Multiplier	3.1
AlphaTrend	Period	14
AlphaTrend	Coefficient	1.0
AlphaTrend	Volume mode	MFI (use RSI if no volume)
EMA Fast	Period	9
EMA Mid	Period	21
EMA Slow	Period	50
EMA BBSR (trend bias)	Period	200
RSI	Length	14
RSI	Bull zone	45 – 70
RSI	Bear zone	30 – 55

MACD	Fast	8
MACD	Slow	17
MACD	Signal	9
Confluences required	Min of 5	3

DE v4 TREND Signal Logic

Hard gate (ALL 3 must pass for a TREND signal):

- LONG gate: SuperTrend bullish + price above EMA200 + EMA50 rising
- SHORT gate: SuperTrend bearish + price below EMA200 + EMA50 falling

Confluence scoring (need min 3 of 5):

- SuperTrend bullish/bearish
- AlphaTrend continuously bullish/bearish ($AT > AT[2] > AT[4]$)
- Price above/below EMA200
- RSI in bull zone (45-70) or bear zone (30-55)
- MACD line above/below signal line

TREND BUY fires when: hard gate passes + score ≥ 3

TREND SELL fires when: hard gate passes + score ≥ 3

The Pine code is already in [research/DE_v4_V2.pine](#). Any strategy should import or replicate this logic exactly.

3. OPENING TRADE SYSTEM

Source file: [research/open_trade.pine](#) (indicator) and [research/opening_system_report.pdf](#)

Entry Rules

1. **Time:** 9:50 AM + 9:55 AM + 10:00 AM **AEST** — all three bars
 - Timezone: ["Australia/Sydney"](#) (handles AEST UTC+10 and AEDT UTC+11 automatically)
 - **Do NOT use hardcoded "UTC+10"** — this fires 1 hour early Oct–Apr during daylight saving
2. **Days:** All 5 days Monday–Friday
 - Best day: Tuesday (WR 81.6%, PF 2.50)
 - 2nd best: Friday (WR 75.0%, PF 1.69)
3. **Signal:** DE v4 TREND BUY → LONG. TREND SELL → SHORT. Skip REV.
4. **Entry execution:** Enter at **open of the NEXT bar** after the signal bar closes
5. **Max trades:** 1 trade per session day. Once entered, no more entries until next day.

Exit Rules

- **Stop Loss:** 15 points fixed. Always. No exceptions.
- **Take Profit Option A (High Win-Rate):** 10 points
- **Take Profit Option B (Max Net):** 20 points
- No trailing stop in this system. Fixed TP and SL only.

Expected Backtest Results (2016–2026, 10 years)

Mode	Days	TP	Trades	Win Rate	Profit Factor	Net (pts)	Net (\$)
High-WR	All 5	10	242	75.6%	1.74	+703	+\$70,300
Max-Net	All 5	20	242	59.1%	1.72	+1,133	+\$113,300
High-WR	Tue+Fri	10	87	79.3%	2.16	+333	+\$33,300
Max-Net	Tue+Fri	20	87	65.5%	2.26	+603	+\$60,300

Max drawdown (TP=10, all days): -55 pts (-\$5,500)

Max drawdown (TP=20, all days): -123 pts (-\$12,300)

Every winning trade = exactly +9 pts after commission (TP hit).

Every losing trade = exactly -16 pts after commission (SL hit).

This confirms clean fixed TP/SL exits with no partial fills.

Yearly Breakdown (TP=10, All Days)

Year	Trades	WR	PF	Net pts
2016	21	71%	1.41	+39
2017	26	73%	1.53	+59
2018	24	79%	2.14	+91
2019	26	81%	2.36	+109
2020	24	75%	1.69	+66
2021	30	77%	1.85	+95
2022	24	88%	3.94	+141
2023	21	67%	1.12	+14
2024	13	62%	0.90	-8
2025	18	67%	1.12	+12
2026	15	87%	3.66	+85

4. MASTER SYSTEM (13 UTC WINDOWS)

Source file: [research/master_system.pdf](#)

Trades specific UTC hour + day combinations. Two operating modes:

Trend Mode

- No take profit — hold until next DE v4 signal flip
- Win rate: 38%
- Profit Factor: 2.85
- Stop Loss: 15 pts always

Scalp Mode

- Only activates when **ATR(20) ≥ 6**
- Take Profit: 30 pts
- Stop Loss: 15 pts
- Win rate: 75%

The 13 Proven UTC Windows

Direction	UTC Hour	Day
BUY only	05:00	Friday
BUY only	01:00	Tuesday
BUY only	01:00	Friday
BUY only	03:00	Wednesday
BUY only	03:00	Thursday
BUY only	04:00	Wednesday
SELL only	05:00	Monday
SELL only	05:00	Tuesday
SELL only	05:00	Thursday
SELL only	04:00	Thursday
SELL only	23:00	Monday
SELL only	23:00	Tuesday
ANY direction	14:00	Monday

Master System results (DE v4 V2, 2016–2026):

- N=328, WR=38.4%, PF=2.85, Net=+4,844 pts, MaxDD=-184 pts

5. MONTHLY REPORT SYSTEM

Source file: [research/monthly_report.pdf](#) — DE v4 V2 BASE

- Period: 2019–2026
- Total trades: 213
- Win Rate: 42.7%
- Profit Factor: 1.85
- Net result: +2,691 pts
- Max Drawdown: -407 pts

6. FILES ALREADY IN THE REPOSITORY

All files are in `/research/` folder on branch `claude/amazing-johnson-ad1h2r`:

File	Description
<code>`DE_v4_V2.pine`</code>	The actual DE v4 indicator (full source code)

`DE_v4_P1P2.pine`	DE v4 with Ultimate Windows filter
`open_trade.pine`	Opening trade indicator (simplified proxy signal)
`opening_system_report.pdf`	Opening system PDF with full stats
`master_system.pdf`	13-window master system PDF
`monthly_report.pdf`	Monthly report PDF
`open_trade_report.pdf`	Open trade detailed report
`de_v4_backtest.py`	Python backtest of DE v4
`opening_system_report.py`	Python backtest of opening system
`master_system.py`	Python backtest of master system

7. WHAT WAS WRONG WITH EVERY VERSION BUILT

1. **UT Bot** — completely wrong indicator system. DE v4 is the real system.
 2. **UTC+10 hardcoded** — fires 1 hour early Oct–Apr. Must use [Australia/Sydney](#).
 3. **Flip SL signs inverted** in ema_hybrid_v2 — caused 5,000+ cascading trades.
 4. **process_orders_on_close=true** — entry and exit processed on same bar close. Must be [false](#) so entry fills at next bar open per PDF rule.
 5. **Approximate signal** — EMA200+RSI only is not DE v4. Must use the real engine.
 6. **1-month backtest** — not representative. Must use "All" (full history 2016–2026).
-

8. WHAT THE NEXT AI NEEDS TO BUILD

A **TradingView Pine Script v6** strategy that:

1. Loads or replicates the DE v4 signal engine exactly (from [DE_v4_V2.pine](#))
2. Filters for TREND signals only (ignore REV)
3. Checks for signal at 9:50, 9:55, 10:00 AM bars using ["Australia/Sydney"](#) timezone
4. Enters at the **open of the next bar** ([process_orders_on_close=false](#))
5. Sets TP=10pts and SL=15pts (fixed, no trailing)
6. Allows max 1 trade per session day
7. All 5 days on by default with toggles
8. Backtests to ~242 trades over 2016–2026 with WR ~75.6% and PF ~1.74
