Flip trades alone: N=158 WR=51.9% PF=3.15 Net=+\$265,060

FLIP adds \$+255,530 net vs base

HOW FLIP ENGINE WORKS

1. Opening entry fires at 9:50 / 9:55 / 10:00 AEST — normal trail system
2. When SL is hit during session (9:00-12:00 AEST): instead of closing flat, immediately reverse to opposite direction at the SL price
3. Flip SL = original SL x 1.5 (wider stop on reversal trade)
4. Flip also trails 30pts behind peak — captures the reversal move
5. Max 1 flip per day (configurable) to prevent over-trading

WHEN IT WORKS BEST

- Opening gap fakeout — price breaks one way then immediately reverses
- Choppy open that traps initial direction then trends opposite

RISK NOTE

- Flip can double drawdown if reversal also fails — wider SL + consecutive losses

EQUITY CURVES: Base vs Flip Engine (2019-2026)
