KEY SIGNAL INSIGHTS FROM 10Y DATA

- TREND SELL signals produce highest net PnL in V2 windows — large avg winners (hold for trend moves)
- TREND BUY signals best for V2 BUY windows — all individually $PF \geq 2.0$
- REV BUY/SELL signals have lower PF but catch exhaustion tops/bottoms in ANY windows
- Best single combo: BUY windows + TREND BUY signals → highest avg win trade
- In SCALP MODE: ALL signal types valid (ATR filter is the key differentiator, not signal type)
- Never skip trendline break filter — removes ~40% of signals but preserves all the edge

STEP 1: CHECK TIME (UTC)

Is current UTC hour in a V2 window?
(01h/03h/04h/05h/14h/23h)

SCALP MODE

Status shows HRW MODE?
(ATR≥6 confirmed)
→ Enter + Set TP=30pts + SL=15pts

TREND MODE

ATR any level.
→ Enter + Set SL=15pts only.
Hold until next signal/SL hit.

EXIT

Price hits TP → WIN
or SL → LOSS.
Then go to STEP 1.

EXIT

Next signal flip → EXIT & FLIP
or SL hit → EXIT.
