Hello, many people know me as WHITE, I have a reputation,

I also have a reputation that SMT has luck

I've been trading for 2 years and have some experience, but I'm not very confident. I'll explain that this file will be the final file. I will analyze and assess it carefully, and I hope everyone will read it carefully and analyze it thoroughly. I will also share my own experience and find out what will happen in the future. I can only share the techniques, but you have to figure it out yourself. I'm ready to give advice to everyone, and I'm also willing to help you understand everything. "Nothing is ever easy if you haven't tried hard enough before." Thank you :)

# What is an alchemist?

The concept of Forex trading is similar to that of an "alchemist" — someone who attempts to transform base metals into precious metals such as gold.

---

## The Key Concept of the Forex Alchemist

1. Increase your knowledge of currency exchange rates
  - From market analysis → trading → profit
  - Similar to the term "khom mu" (gold)
2. Use the word "golden" instead of "gold"
  - Do not use a blunt knife.
- Use tools such as order flow, liquidity, order blocks, and smart money concepts
3. Think and act like a professional trader
  - Market sentiment
  - Has a system and meaning
  - No limits, no fear

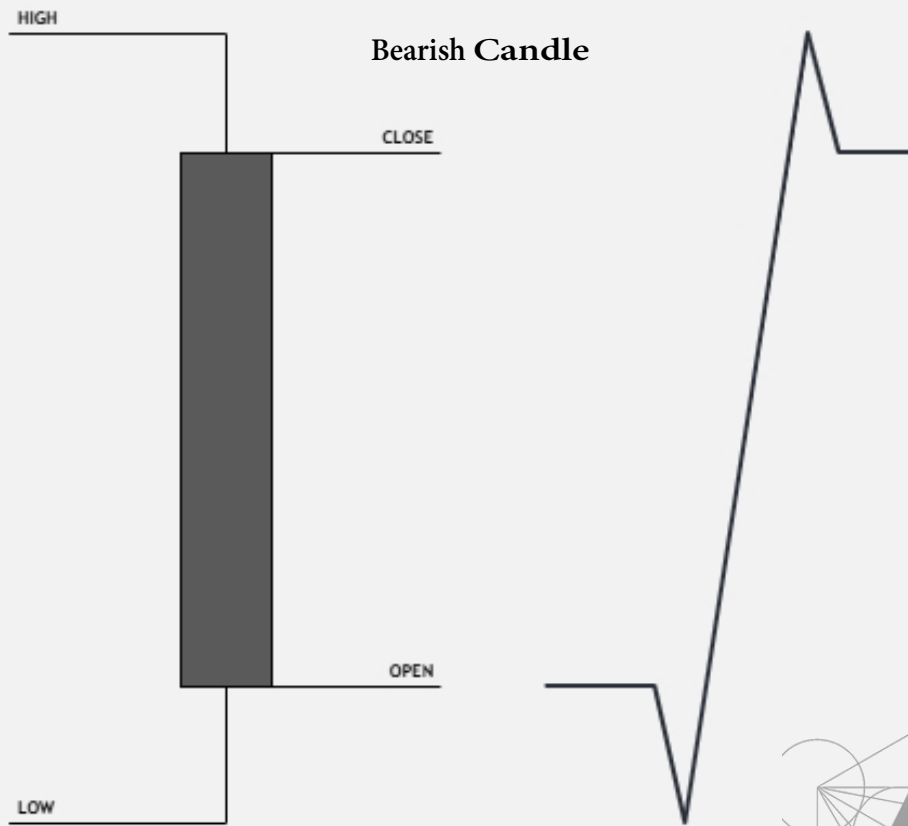

## Comprehensive

Alchemist Forex = A group of traders who trade like alchemists

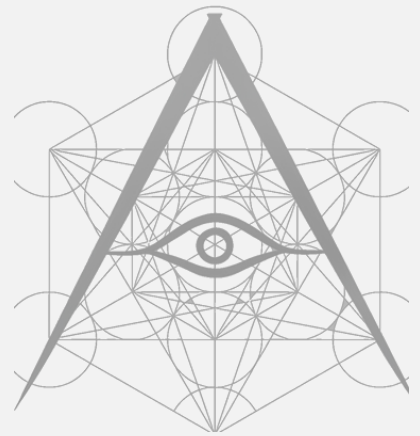

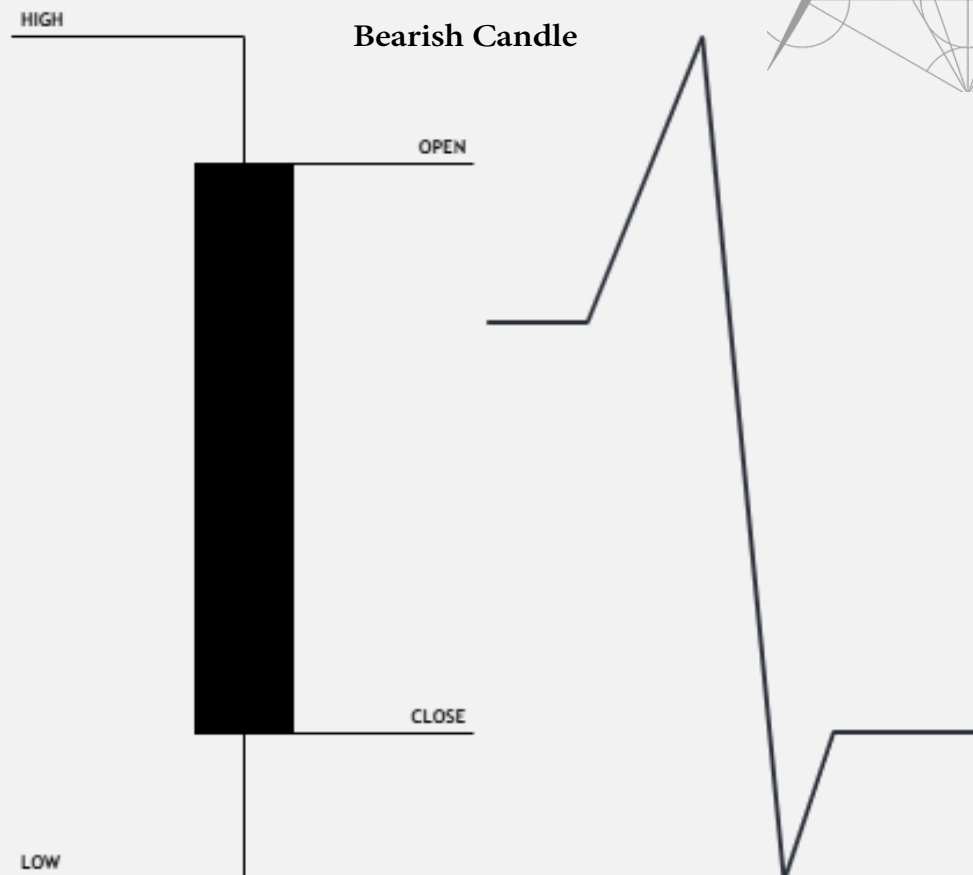

Translation: "Knowledge + Experience + Insight" → "Unwavering Confidence"

# PRICE STORY

## BULLISH CANDLE

## BEARISH CANDLE

# PRICE STORY

## Price Chart

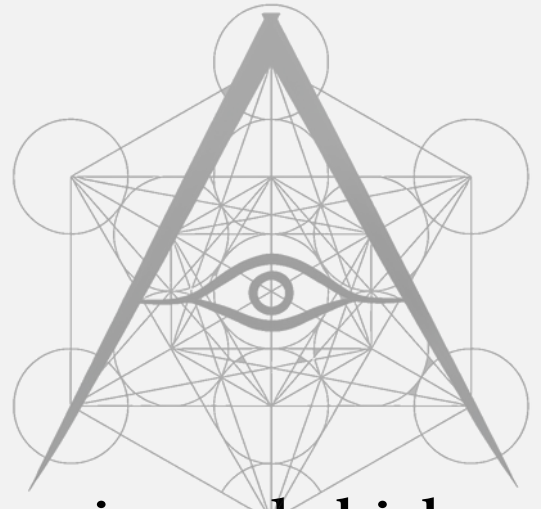

### OHLC

O(OPEN) - Opening Price

H(HIGH) - Highest Price

L(LOW) - Lowest Price

C(CLOSE) - Closing Price

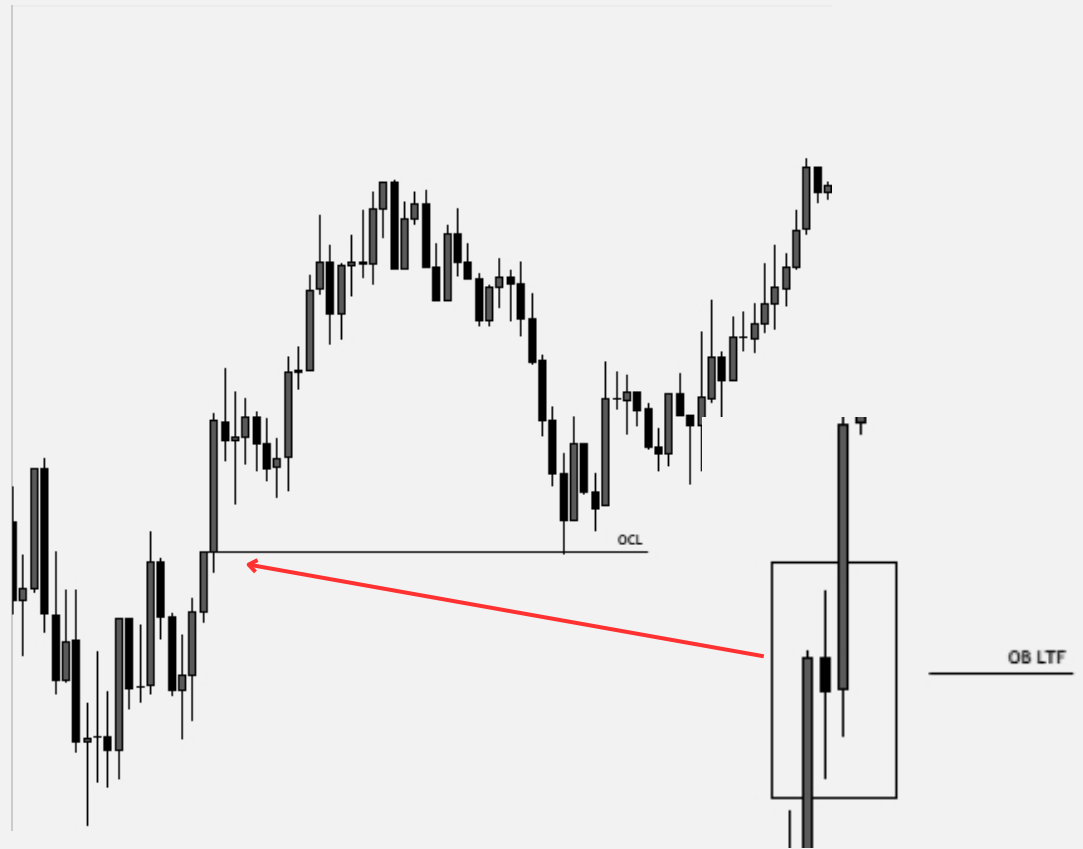

These points show which side is buying and which side is selling, indicating the direction of the price movement.

When playing together, such as playing CRT, we will find the setup. The SNR inside the CRT is not good

# KEY

## OPEN CLOSE LEVEL - OCL

Graphic mode

OCL is a moving average with a fixed period. It is similar to the Hidden base of SMC. It is also called HTF, which looks like a P-P pattern in HTF, but in LTF there will be an order block.

# KEY

## OPEN CLOSE LEVEL - OCL

Chart Pattern

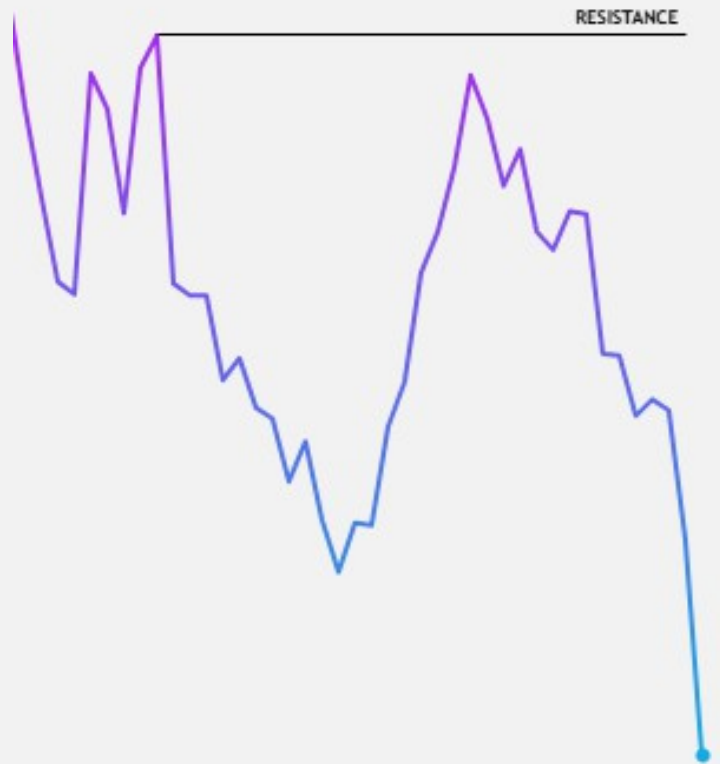

OCL is a type of P-type silicon that is similar to SMC's Hidden Bese silicon.

It is also called HTF, which looks like a D-P D-P pattern in HTF. However, in LTF there will be an order block that remains the same

# RESISTANCE- CLASSIA A

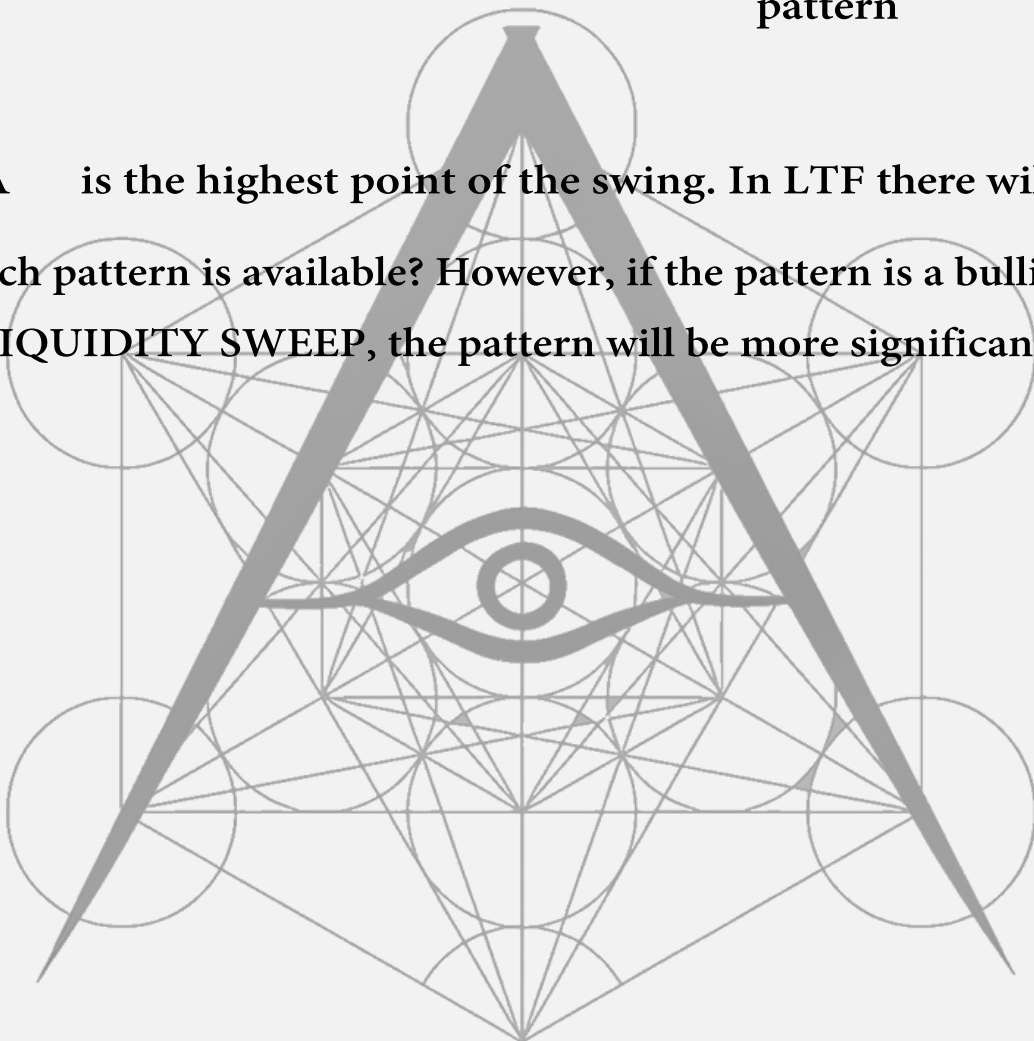

Chart pattern

Line graph  
pattern

**Classic A** is the highest point of the swing. In LTF there will be an OB

Which pattern is available? However, if the pattern is a bullish +  
**LIQUIDITY SWEEP**, the pattern will be more significant.

# SUPPORT - CLASSIC V

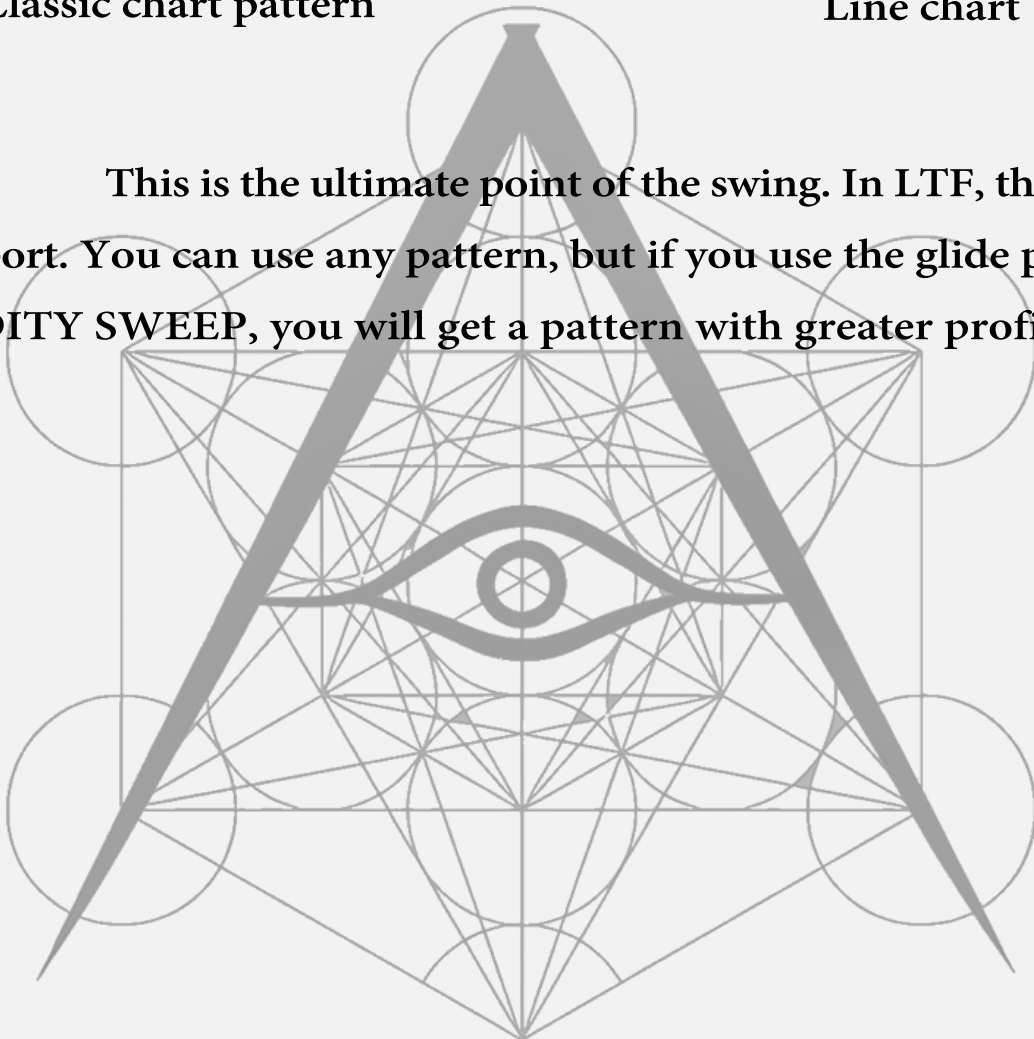

Classic chart pattern

Line chart

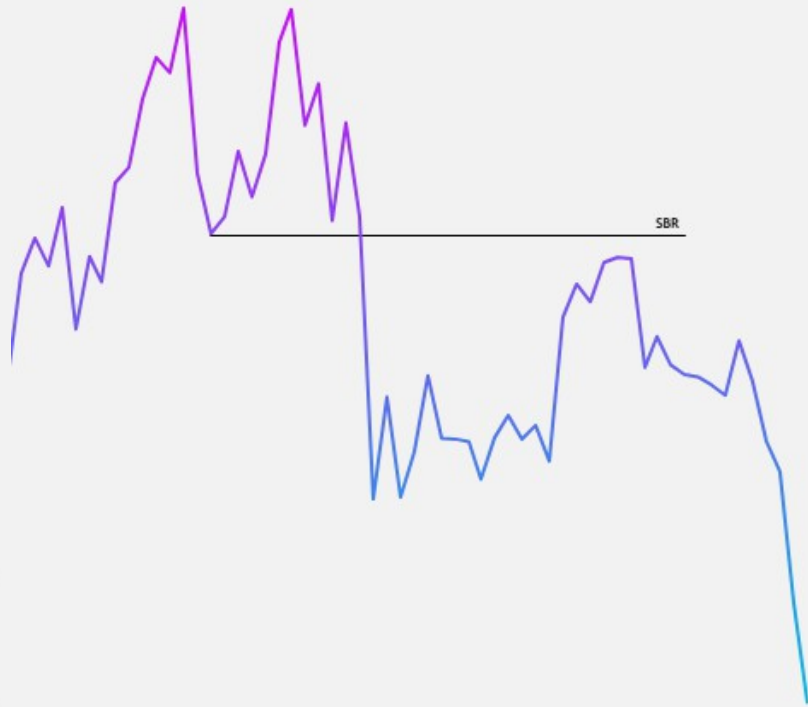

**Classic V** This is the ultimate point of the swing. In LTF, there will be OB support. You can use any pattern, but if you use the glide pattern + LIQUIDITY SWEEP, you will get a pattern with greater profitability.

# SUPPORT BECOMES RESISTANCE - SBR

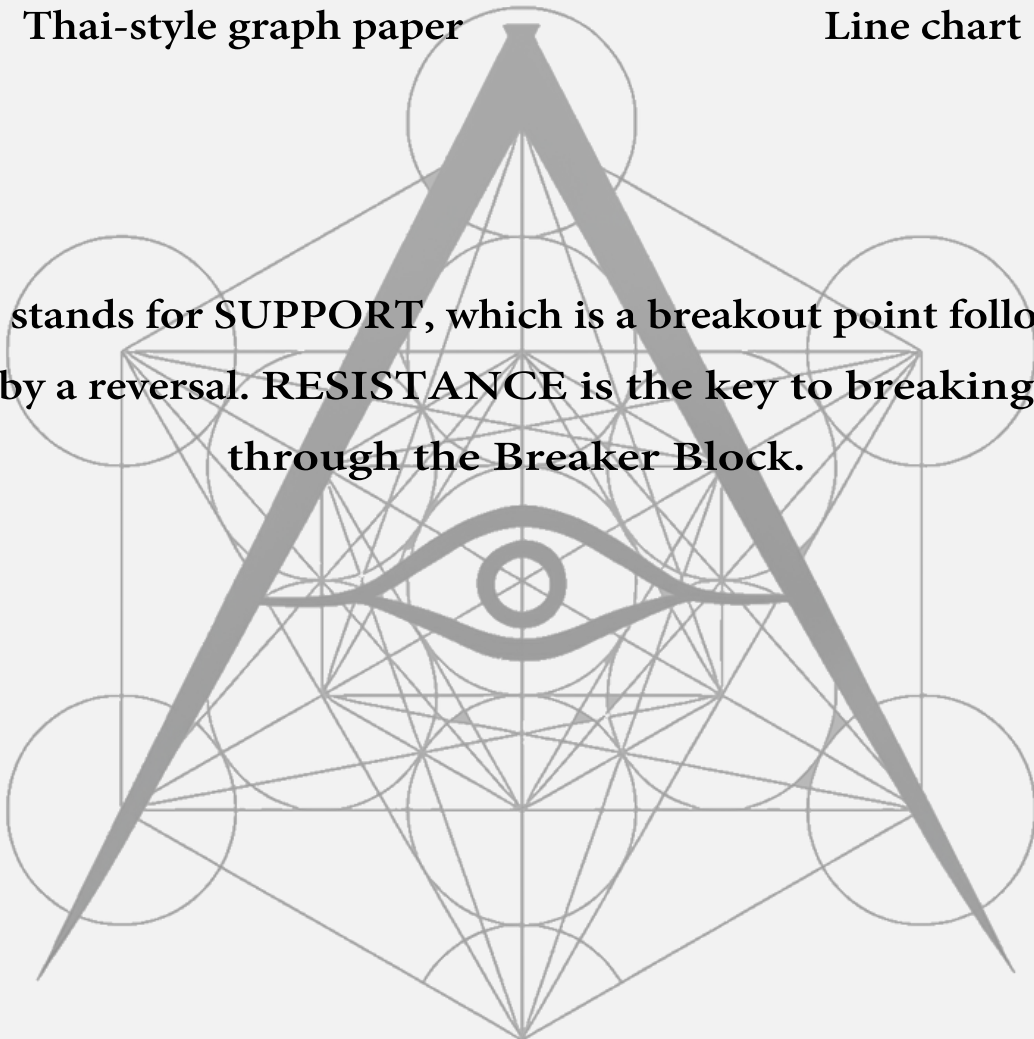

Thai-style graph paper

Line chart

**SBR stands for SUPPORT, which is a breakout point followed by a reversal. RESISTANCE is the key to breaking through the Breaker Block.**

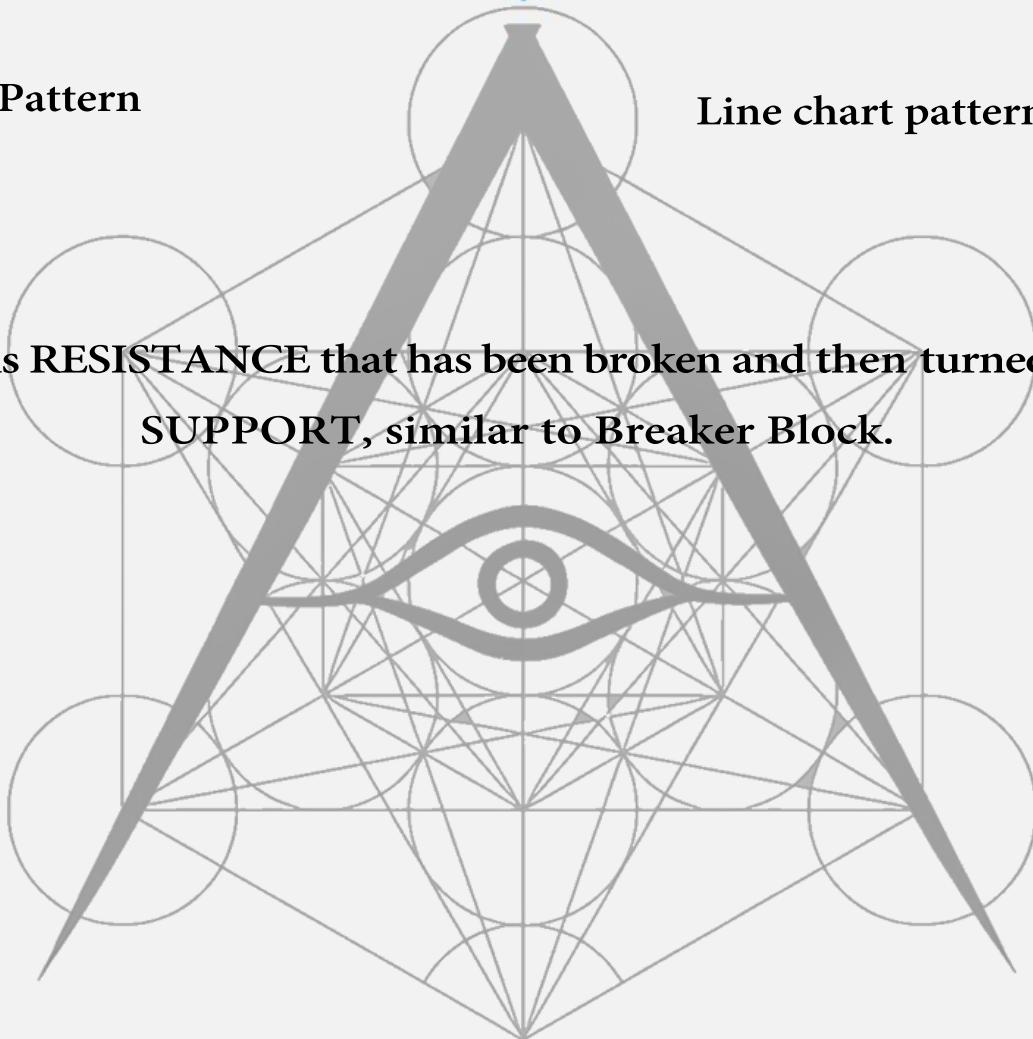

# RESISTANCE BECOMES SUPPORT - RBS

Chart Pattern

Line chart pattern

RBS is RESISTANCE that has been broken and then turned into SUPPORT, similar to Breaker Block.

# QUASIMODO - QML

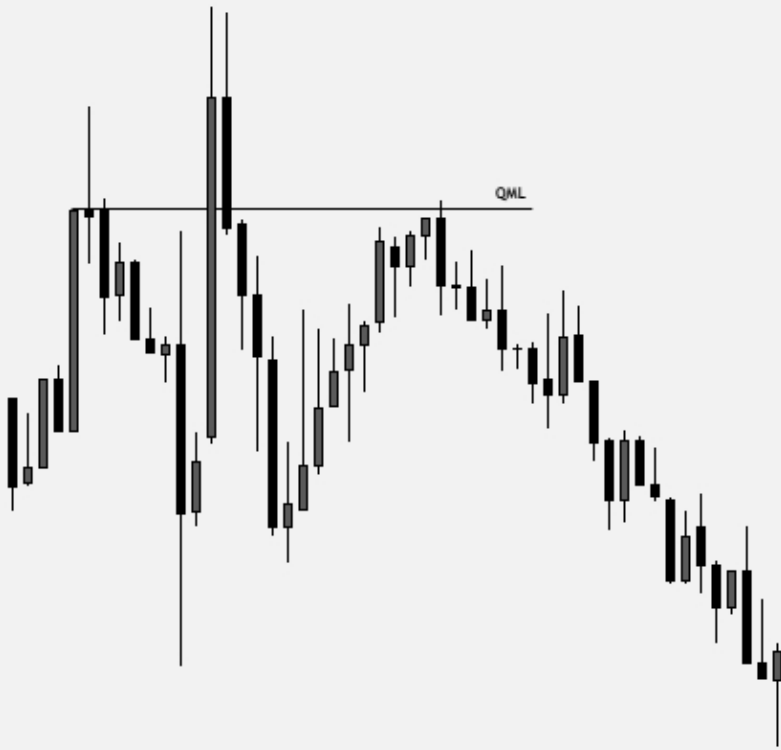

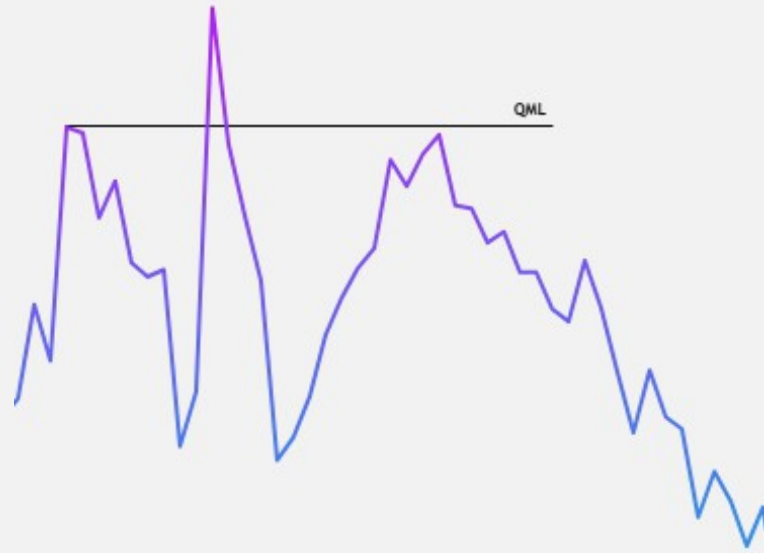

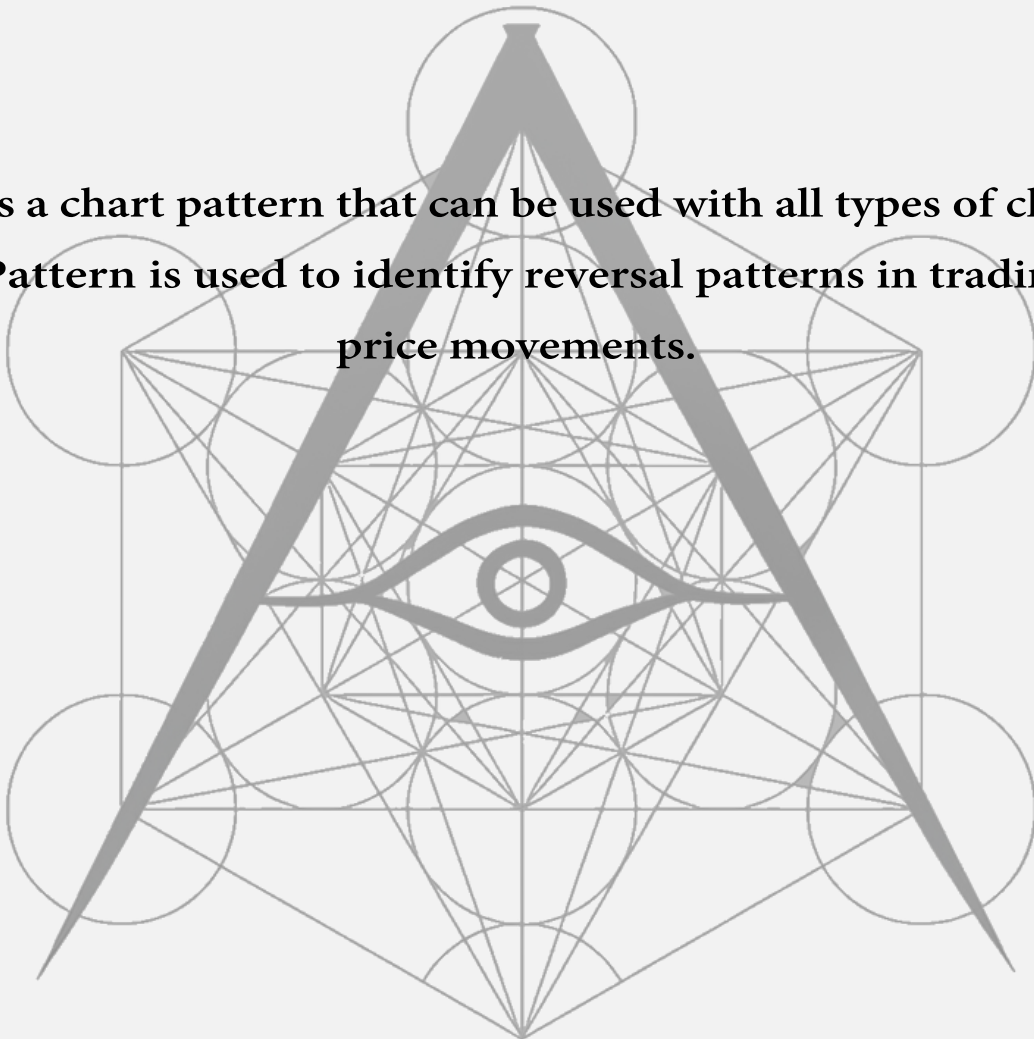

Chart pattern

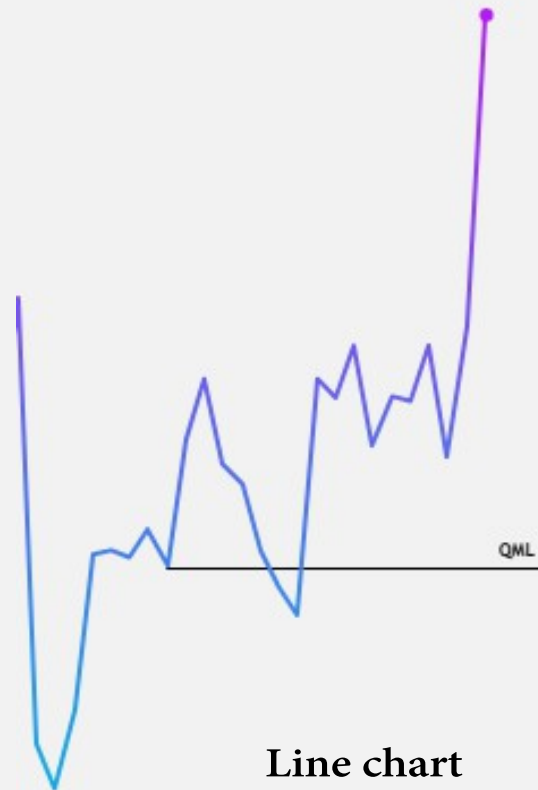

Line graph pattern

QM is a chart pattern that can be used with all types of charts.  
Chart Pattern is used to identify reversal patterns in trading from  
price movements.

# QUASIMODO - QML

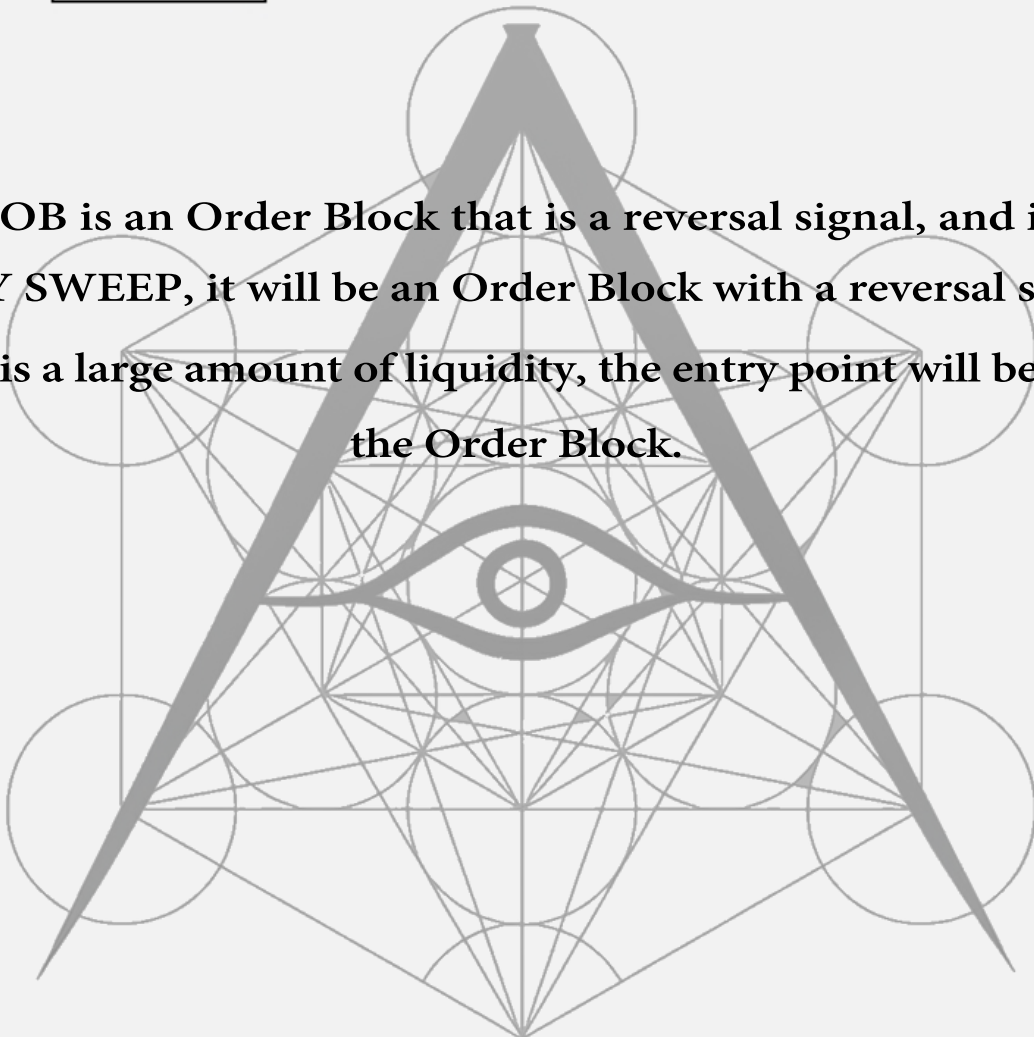

QM is a reversal pattern that can be used with all types of charts. Chart Pattern is used to identify reversals in trading from price formation patterns.

# ENGULFING OB

EF OB is an Order Block that is a reversal signal, and if there is a LIQUIDITY SWEEP, it will be an Order Block with a reversal signal.

When there is a large amount of liquidity, the entry point will be higher than the Order Block.

# ENGULFING OB

EF OB is an Order Block that is used to prevent slippage and if there is a LIQUIDITY SWEEP, it will be an Order Block that has a limit. Many people use it to enter the market more than other Order Blocks.

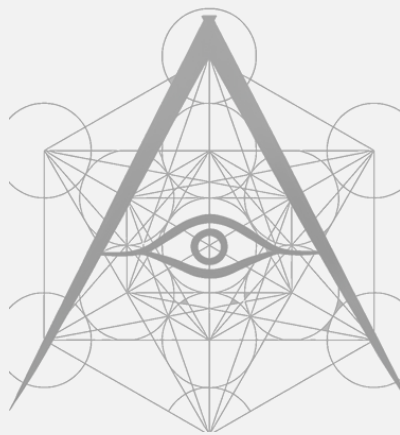

If we use AOI, it's okay. What about FVG? Different entry points

## TRENDLINE KEY - TL

The trend line will have a certain probability. 6 pattern

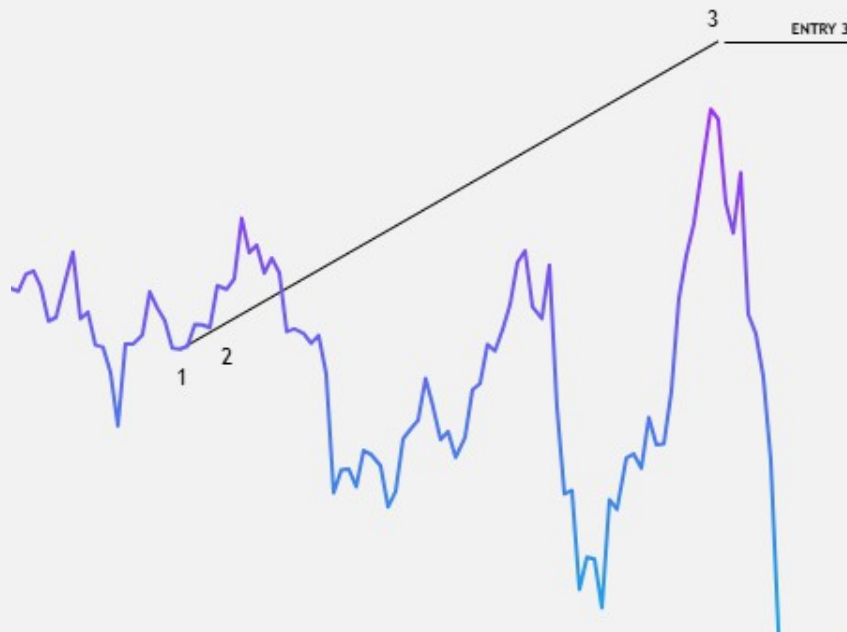

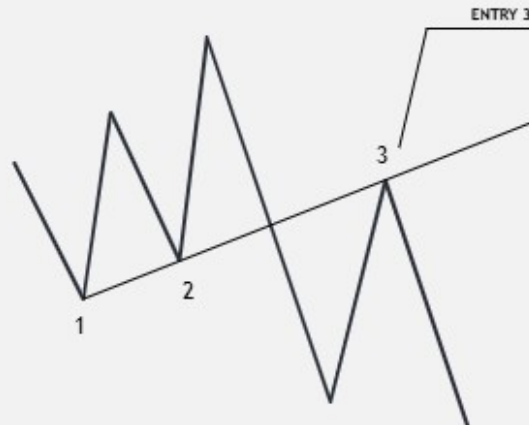

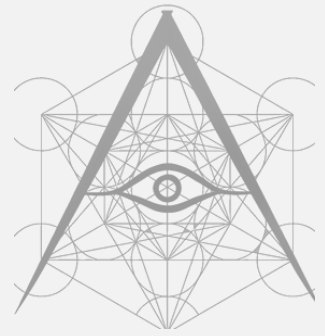

By observing the trendline pattern, it is important to note that the trendline must have been tested twice. On the third test, we will enter the trendline point. Find the KEY point that aligns with the trendline to maximize the trend.

The train line plays a crucial role in helping our order form run smoothly.

# Market Structure - SMC

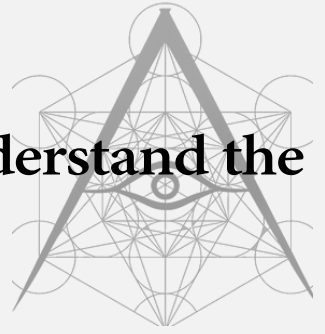

# Market Structure - SMC

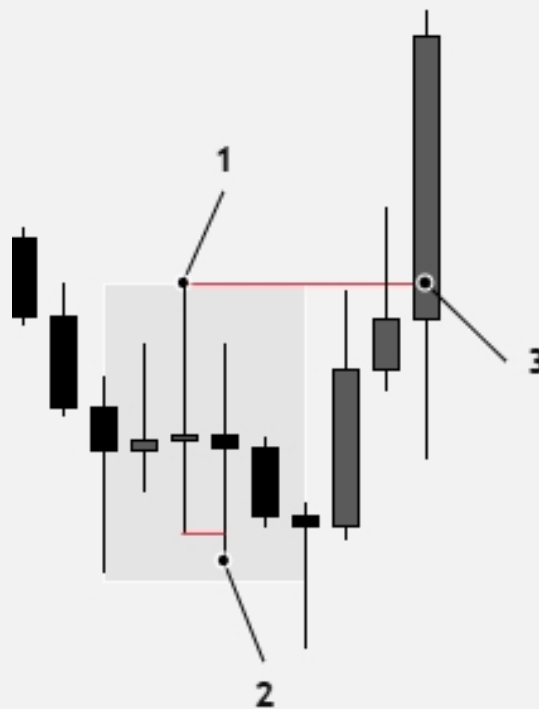

# LIQUIDITY INDUCEMENT

Before learning about IDM, you must understand the  
concept of  
VALID PULLBACK

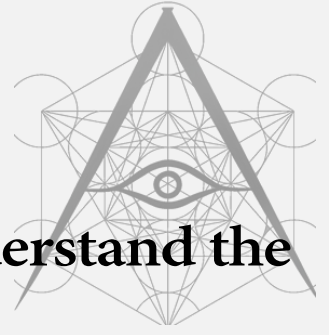

A VALID PULLBACK is when the price corrects itself  
UP TREND

A reversal that occurs at the right time

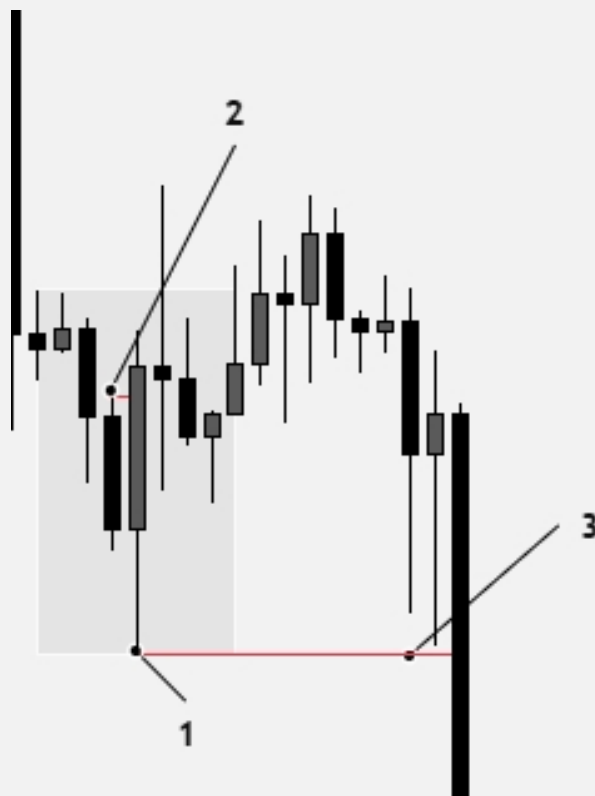

1. Look for the highest point of the pullback
2. Break through the resistance level
3. If there is a breakout You must add a stop loss order

# LIQUIDITY INCENTIVE

Before learning about IDM, you must understand the  
concept of  
VALID PULLBACK

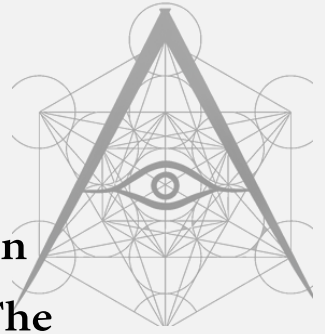

A VALID PULLBACK is when the price of a stock in a DOWN  
TREND

This is a reversal that occurs when the price is falling.

1. Look at the pullback
2. Get ready to break out
3. If there is a breakout You must add a stop loss order

# LIQUIDITY INDUCEMENT

IDM is a VALID PULLBACK

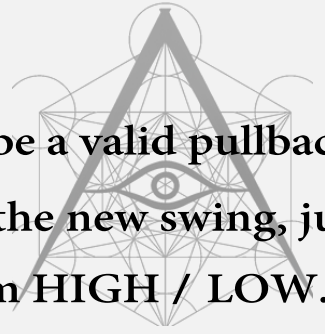

IDM is used in HIGH/LOW confirmation  
And will confirm the IDM will be cleared The  
construction will create a VALID PULLBACK

~~Right~~ IDM is always available

Then where will we use IDM in the confirmation process?

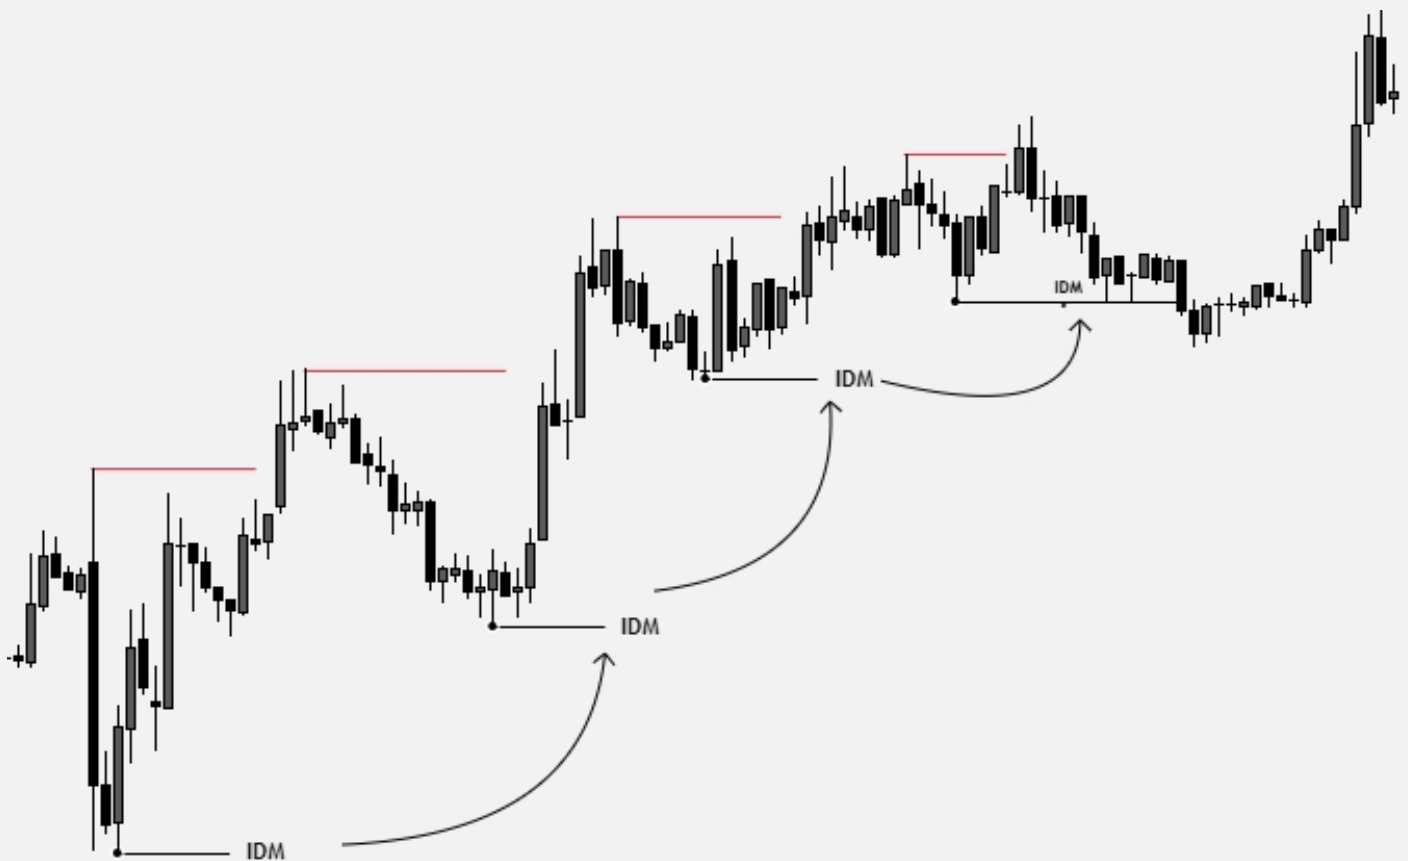

# LIQUIDITY INDUCEMENT

The answer is the latest version. If there is a swing, it will be a valid pullback.  
(VALID PULLBACK) If IDM comes, it will be spread to the new swing, just  
like that, until there is a clear IDM. We can also confirm HIGH / LOW.

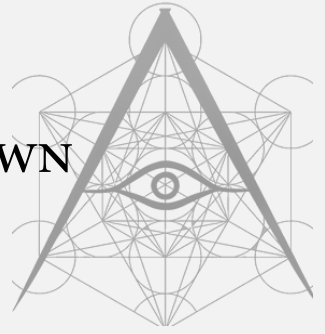

UP TREND

Credit / Warriors Trader

# LIQUIDITY INDUCEMENT

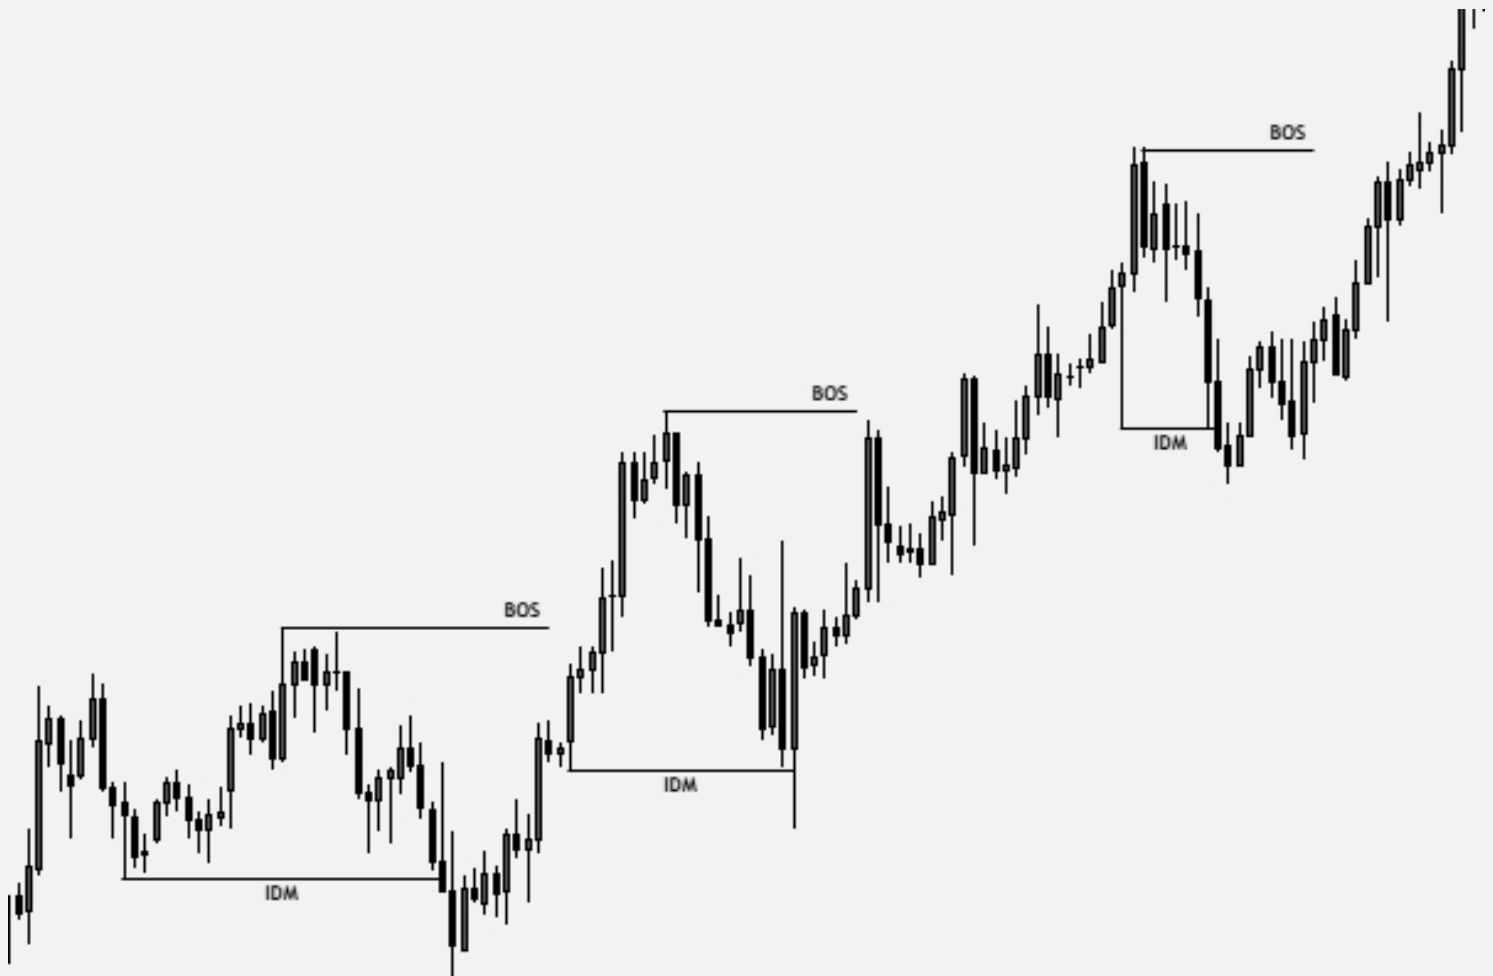

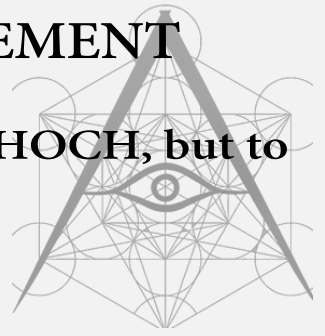

DOWN TREND Use the same method DOWN  
TREND

# MARKET STRUCTURE + INDUCEMENT

MARKET STRUCTURE will be formed by BOS / CHOCH, but to confirm BOS, IDM must be included

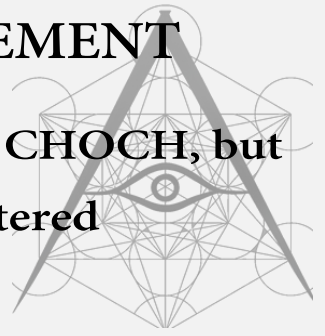

UP TREND

# MARKET STRUCTURE + INDUCEMENT

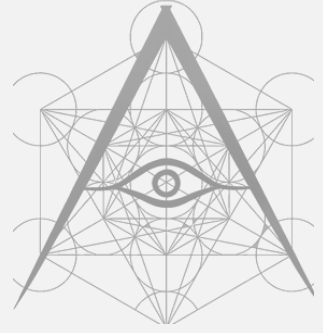

MARKET STRUCTURE will be formed with BOS / CHOCH, but  
verification of BOS requires IDM to be entered

DOWN TREND

# ICT TIME SESSION

## ASIA RANGE LIQUIDITY

### WHAT IS ASIA RANGE?

**ASIA SESSION** is the time when the market is open.

The current market price will fluctuate in the short term, causing volatility in the **SESSION** price.

What is the nature of **ASIA RANGE**? The price is high, so we will wait and see.

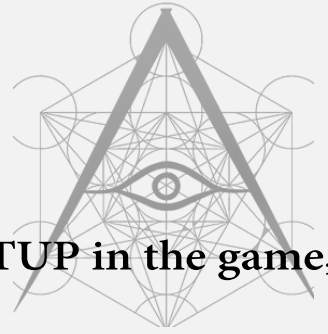

We will use **ASIA P. LIQUIDITY** to determine the **ASIA RANGE HIGH/LOW**

If the price reverses **BreakOut** , we will look for

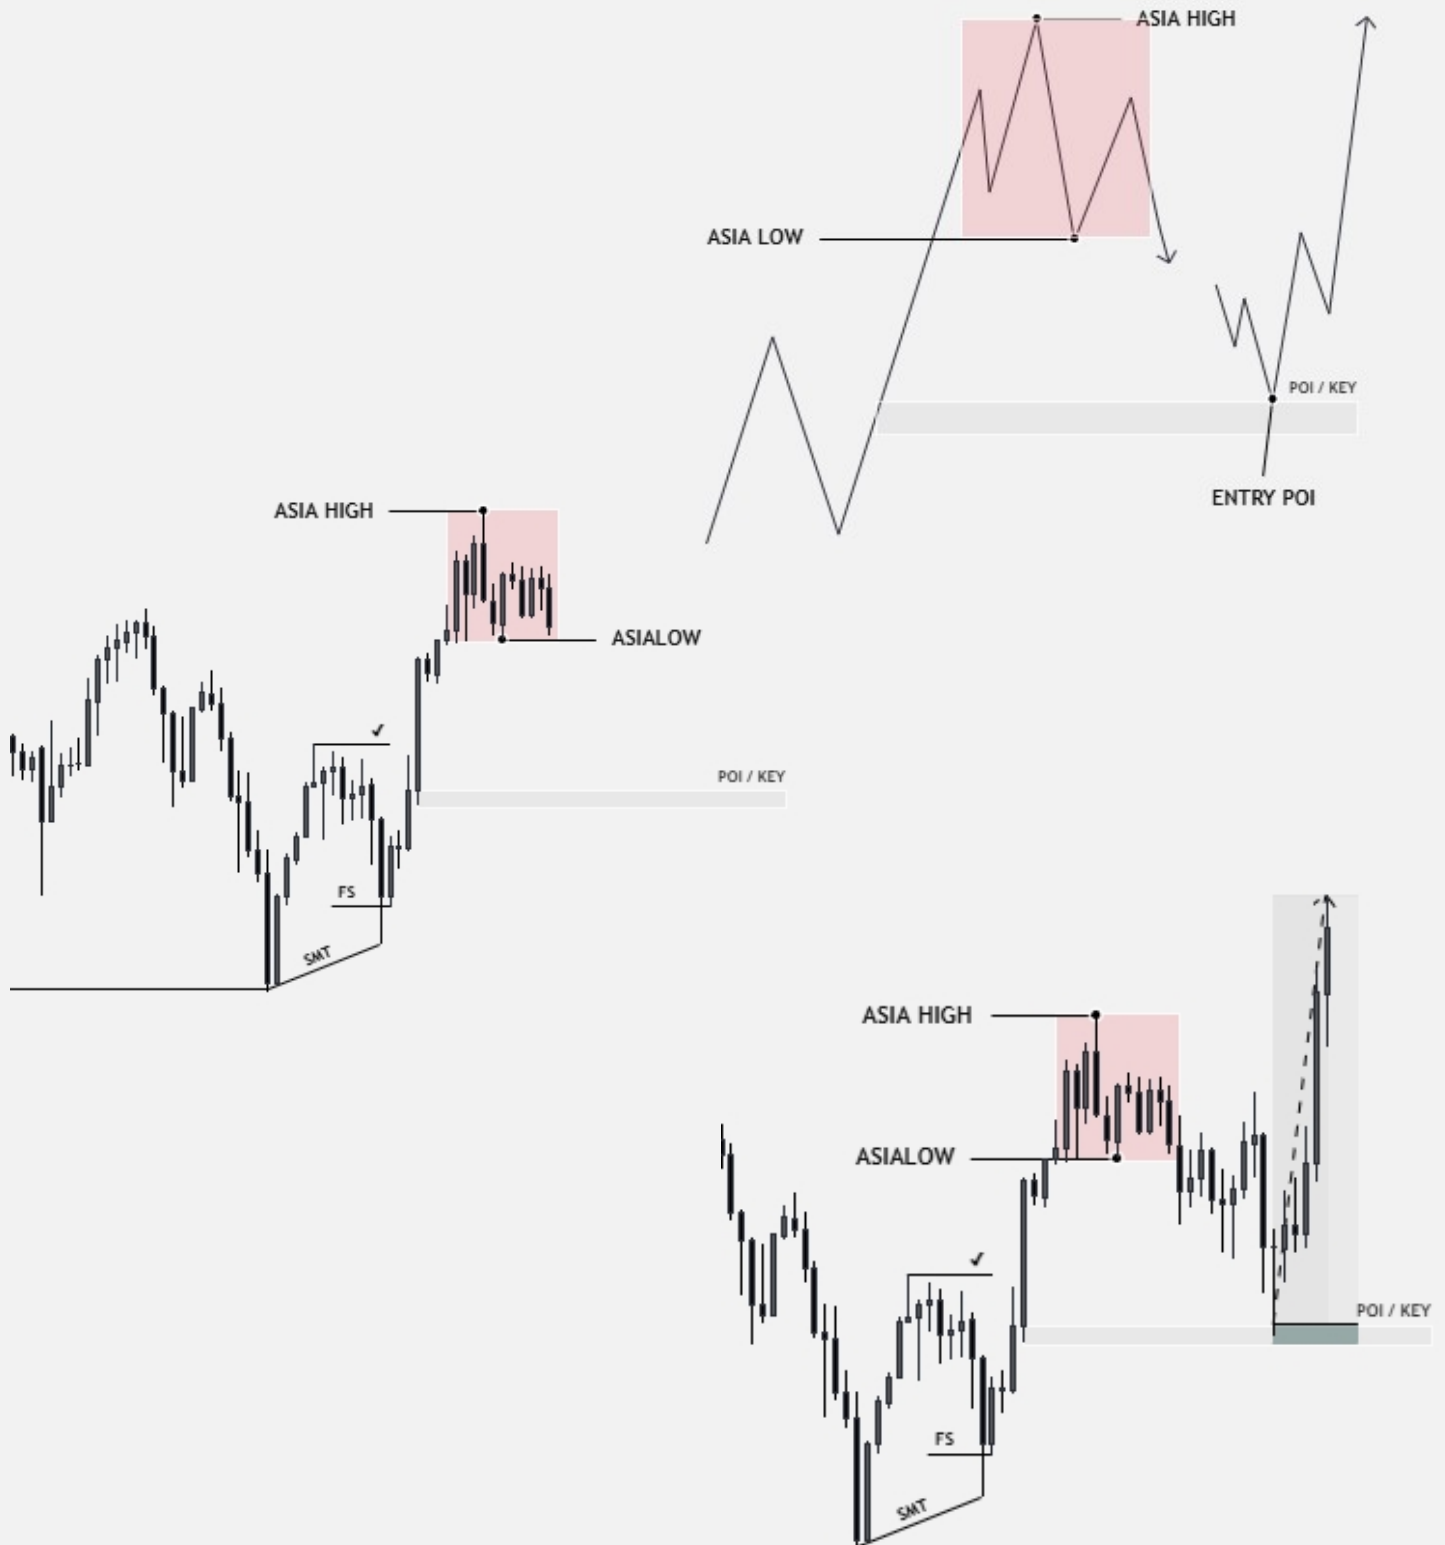

**SETUP** during the trading session

# ICT TIME SESSION

## ASIA RANGE What is it?

We will take LIQUIDITY If BO is ~~also~~ we will search for SETUP in the game, but we must look at the structure first

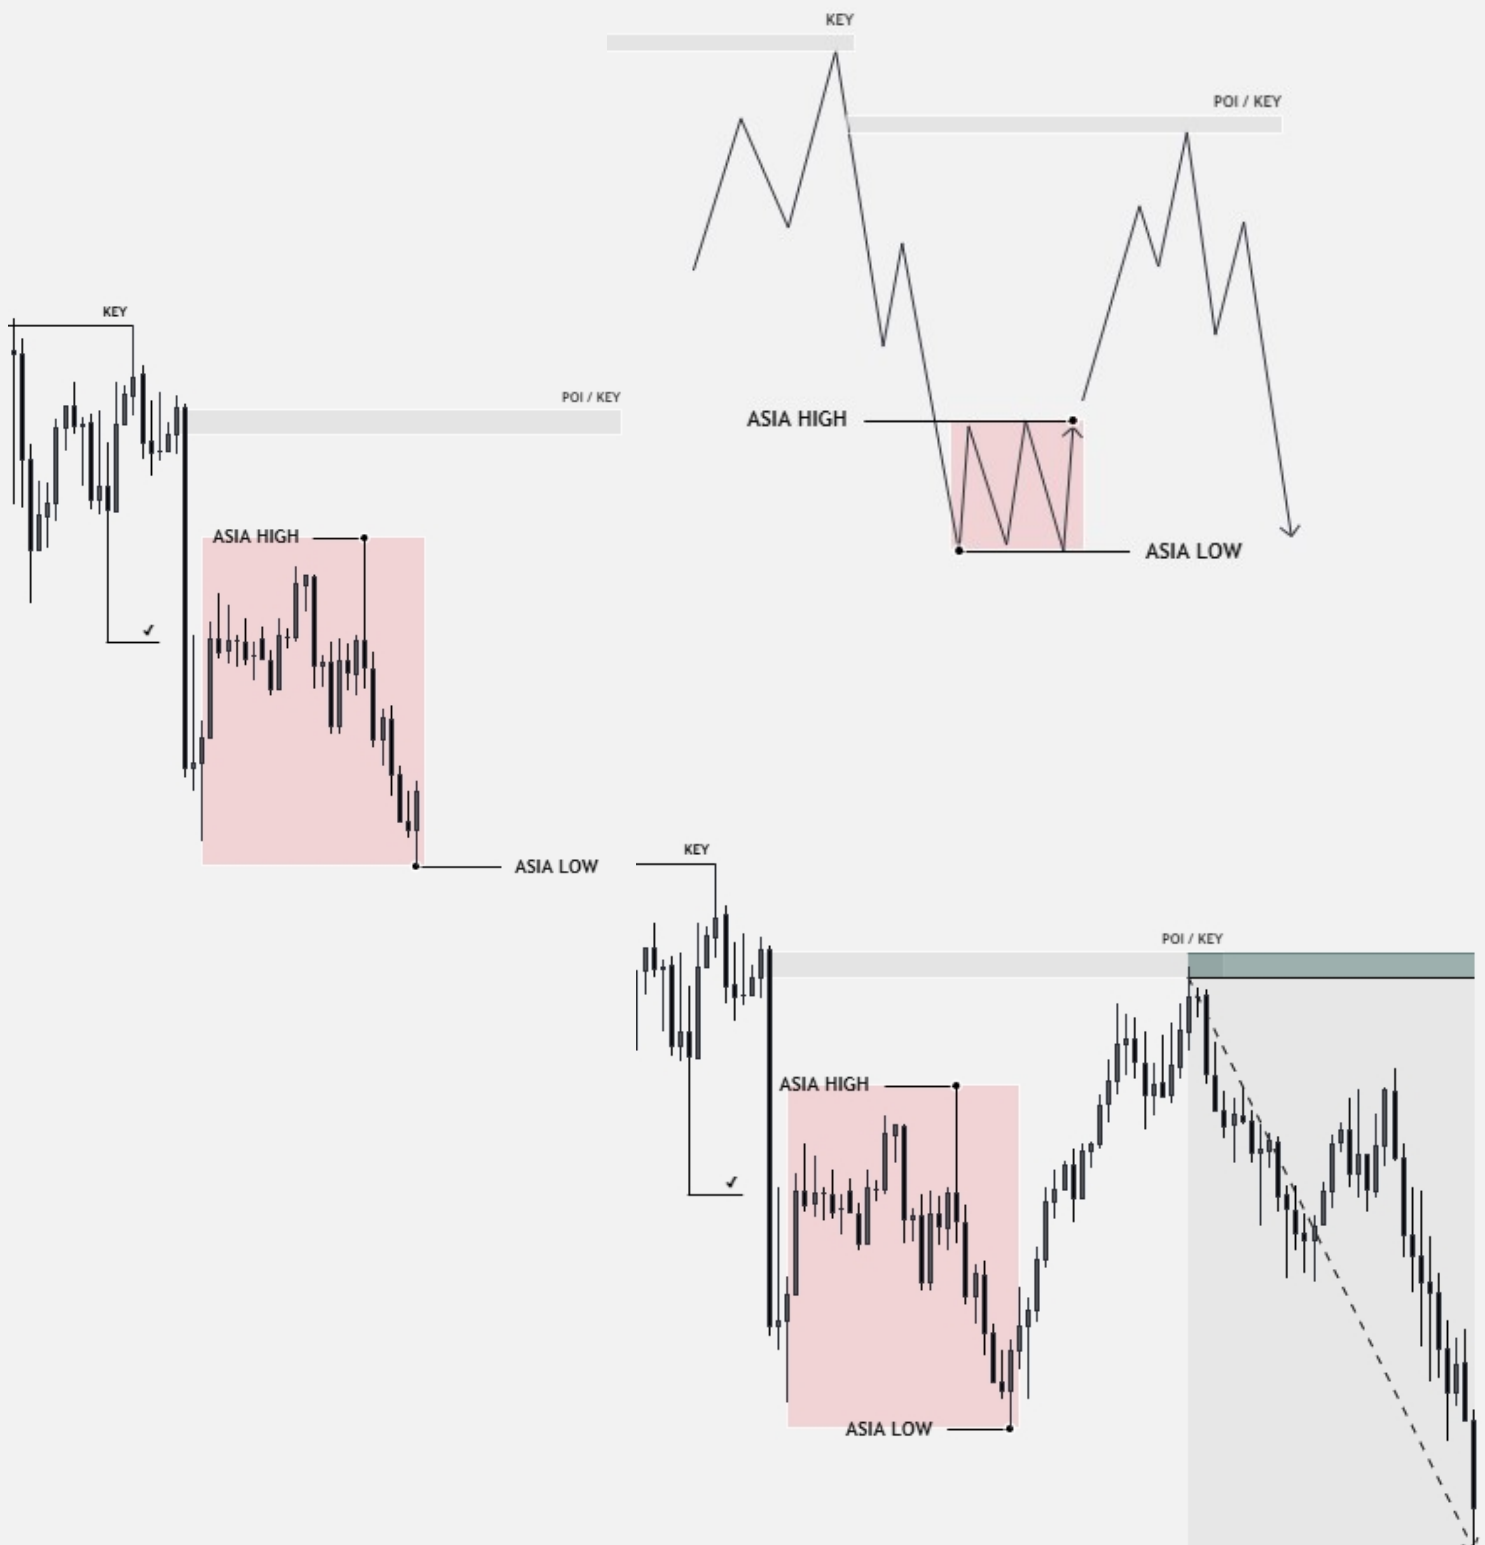

# ICT TIME SESSION

## ASIA RANGE What is it?

We will take the LIQUIDITY if it is BORN then we will find SETUP in the game, but we must look at the structure of the composition

The diagram illustrates a trading strategy using candlestick patterns and price movement. It consists of three main parts:

- Top Left:** A candlestick chart showing an uptrend followed by a sharp decline. A horizontal line marks the 'MEAT LOW' level. A vertical line marks the 'KEY' level. A label 'EX/1' is present.
- Top Right:** A line graph showing price movement. A horizontal line marks the 'WICK HIGH' level. A horizontal line marks the 'MEAT LOW' level. A label '[TS]' is present.
- Bottom:** A candlestick chart showing a 'KEY' pattern. A horizontal line marks the 'MEAT LOW' level. A vertical line marks the 'KEY' level. A label 'WICK HIGH' is present. A label 'KEY เกิดการกลับตัว' (KEY occurs a reversal) is present.
